

Axiom & Axiom PRO MFD Adaptor Plates

IMPORTANT INFORMATION

Raymarine offers a range of adaptor plates to enable you to swap out an older Raymarine display with an Axiom or Axiom Pro display, fitting into the existing mounting surface cutout. The adaptors are available as optional accessories; for part numbers, refer to the table below.

PLEASE NOTE: Only some of the adaptor plates require new holes to be drilled; refer to the table below. For these adaptors, a drilling template is available at the same download location as this document, to assist you in positioning the new holes. The remaining adaptors do NOT require any new holes to be drilled, and therefore no drilling template is supplied. If you require the dimensions and instructions for these adaptors, refer to:

2D CAD drawings available at the following location:
